→ Why Microsoft 365 needs backup

Microsoft 365 is used broadly across organizations, and contains volumes of important data. However this broad use makes it a frequent vector for ransomware and data loss, both unintentional and malicious. Meanwhile, Microsoft's basic retention period is rarely sufficient to meet organizational and compliance requirements. You need a better way to backup and recover Microsoft 365 data.

→ How Clumio works

Clumio is a cloud-native SaaS solution that requires no hardware deployment or software installations to backup Microsoft 365 data. Simply connect your Microsoft 365 domain to Clumio by logging into the M365 admin portal.

Easily achieve compliance with long-term retention requirements by defining a single backup policy at the domain, group or user level, then monitor via filterable global reports and proactive alerting.

Clumio Microsoft 365 backups are air-gapped outside of your M365 domain, offering instant immutability and efficient granular recovery across Exchange Online, Teams, OneDrive, SharePoint, Contacts and Calendars. From your global dashboard, find sites, folders, files, teams, emails and more with intuitive filtering. Restore across accounts, mailboxes and folders.

Unique benefits of Clumio backup and recovery for Microsoft 365

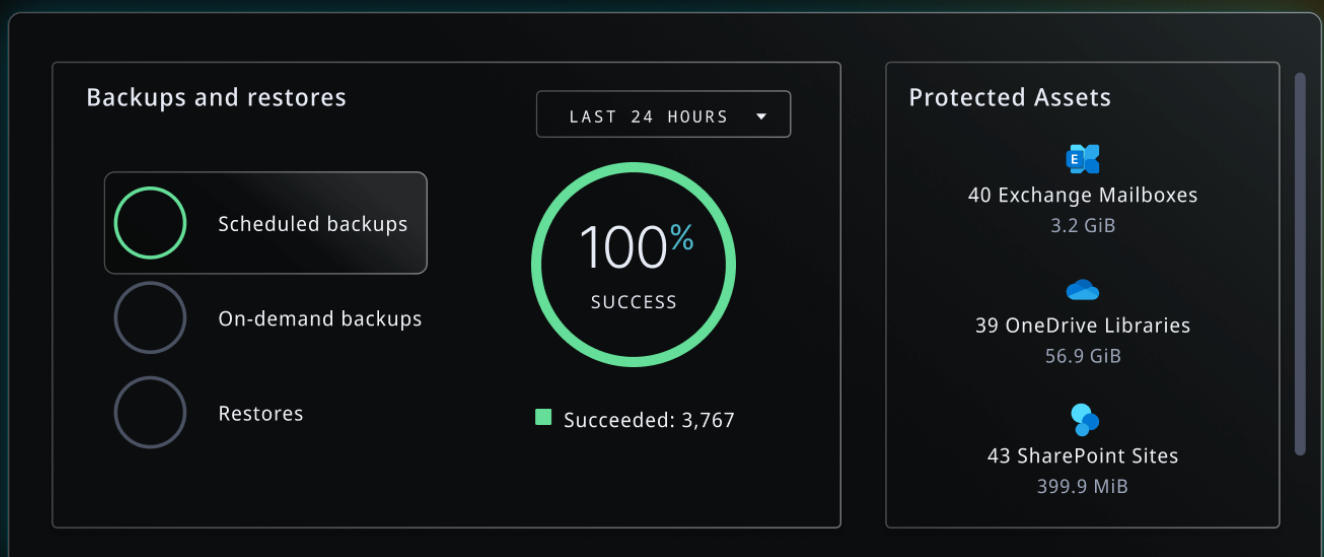

Clumio offers four key benefits for Microsoft 365:

1

Fast, simple data recovery

Exceptional performance powered by Clumio's unique architecture

- Perform global search to quickly recover data from accidental deletions, compromised accounts, ransomware attacks, and other data loss.
- Ingest data at top speed for the best possible time to value
- Reduce your recovery time objective (RTO) with rapid and granular recovery that empowers you to:
 - Search and recover from a single email to a full mailbox
 - Restore teams, channels or conversations to the original or a newly created team
 - Restore any point in time version of your files in OneDrive
 - Restore either an entire SharePoint site or specific contents of that site

2

Secure, un-ransomable backups

Gain peace of mind in case of a ransomware attack or data breach

- Clumio stores backups in immutable format inside Clumio’s secure air-gapped environment, securing them from bad actors, whether internal or external
- Microsoft 365 data is always encrypted separately with unique keys, or bring your own key
- Data transfers are encrypted with end-to-end integrity checks

Security and access

USERS

AUTHENTICATION (SSO/MFA)
AUTO USER PROVISIONING

Authentication (SSO/MFA)

[How to setup your SSO/MFA](#)

Activate either single sign-on (SSO) or multi-factor authentication (MFA). If both need to be activated, Clumio recommends doing it in your identity portal.

Single sign-on (SSO)

Multi-factor authentication (MFA)

✔ **Single sign-on (SSO) is activated**

Clumio is using saml 2.0 for SSO configuration

Single sign-on URL: -

SSO provider: Okta

SAML certificate expires at : 2029-03-21

[> Show Clumio service provider details](#)

Deactivate SSO

3

Effortless compliance

Data retention, SLAs and reporting made easy

- Retain Microsoft 365 data as long as needed to meet compliance requirements
- Apply uniform policies across Microsoft 365 users and services
- Get visibility simply with automated alerts and on-demand reporting
- Meet your SLAs: RPO as low as 1 hour, plus incredibly fast RTO
- Serverless, agentless, effortless SaaS

4

Reduced TCO

Simplify management and opt out of expensive license tiers

- Dramatically reduce costs by more than 75% compared to extending Microsoft 365 enterprise licensing for data protection
- Reduce headcount and deliver higher security with air gapped backups, in-depth compliance reporting, and rapid recovery with flexibility to recover to any account
- Predictable, per-user pricing with no hidden fees
- No additional software or hardware to install and maintain

Experience secure, simple backups with complete coverage
